

Notes for Operators at Field Day

- **Bring your own Headphones, Please. And an adapter to the other size. (1/8" to 1/4" or the other way around.)**
- **Label anything you may walk away from, like the adapter above. I use a cheap ugly Nail Polish, (dollar tree) It even comes with a brush.**
- **When you begin to operate, push the " Tuner " button on the radio. This will get the antenna system set for your operating segment, for optimum power.**
- **When you start "Cntl O" will allow you to change operators in the N1MM log.**
- **As you talk, watch the ammeter on the power supply. It should move with your voice peaks.**
- **If you are changing bands, on the 80/15 or 160/10 stations, confirm that the correct bandpass filter and antenna are connected to you.**
- **The time slot is intended as a two person effort with one talking/operating and the other one staring at the computer, wondering how to "log" in N1MM. There are notes in the red folder and human help available.**
- **Want to increase your cw speed, Sign up with AB7RW. Your speed will be better afterwards.**

Have Fun!
